TEXT CONTROL

Integrating digital document processing solutions, including collaboration, document sharing and **electronic signatures, helps successful organizations serve their customers and support business continuity.**

Implementing digital processes in business operations has a huge impact on how successful an organization is and will be - not just during a pandemic.

The primary motivation for implementing digital document processes has been cost savings, but the current situation shows that these processes have a strategic impact on companies.

Learn how Text Control technology can help your users increase productivity and success.

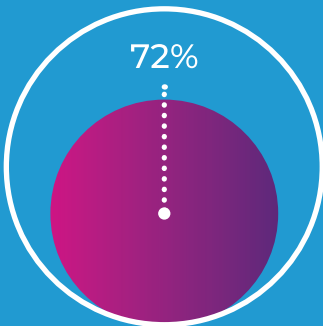

Importance of Digital Documents

In a recent report¹, Forrester Consulting reports on the results of a survey of 450 senior business decision makers in the US, Western Europe, and Asia Pacific who are responsible for digital document management in their companies.

From their research, Forrester identified 3 key findings.

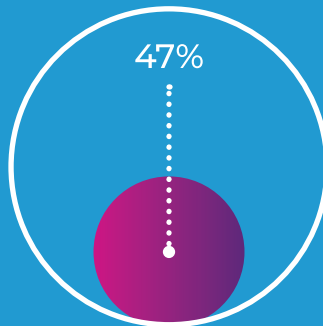

72%

of respondents agree that digital document processes help their organizations to maintain business resilience.

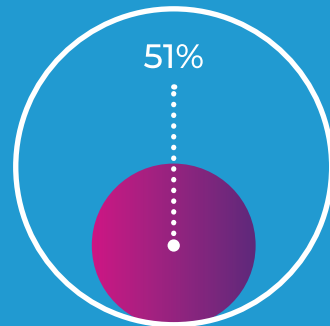

47%

of respondents say that digital document processes enable opportunities to serve customers in a better way during the crisis.

51%

of the respondents claim that new procedures and processes will last beyond the pandemic.

¹ How Digital Document Processes Are Shifting From Best Practice To Business Necessity, Forrester Consulting, 2020

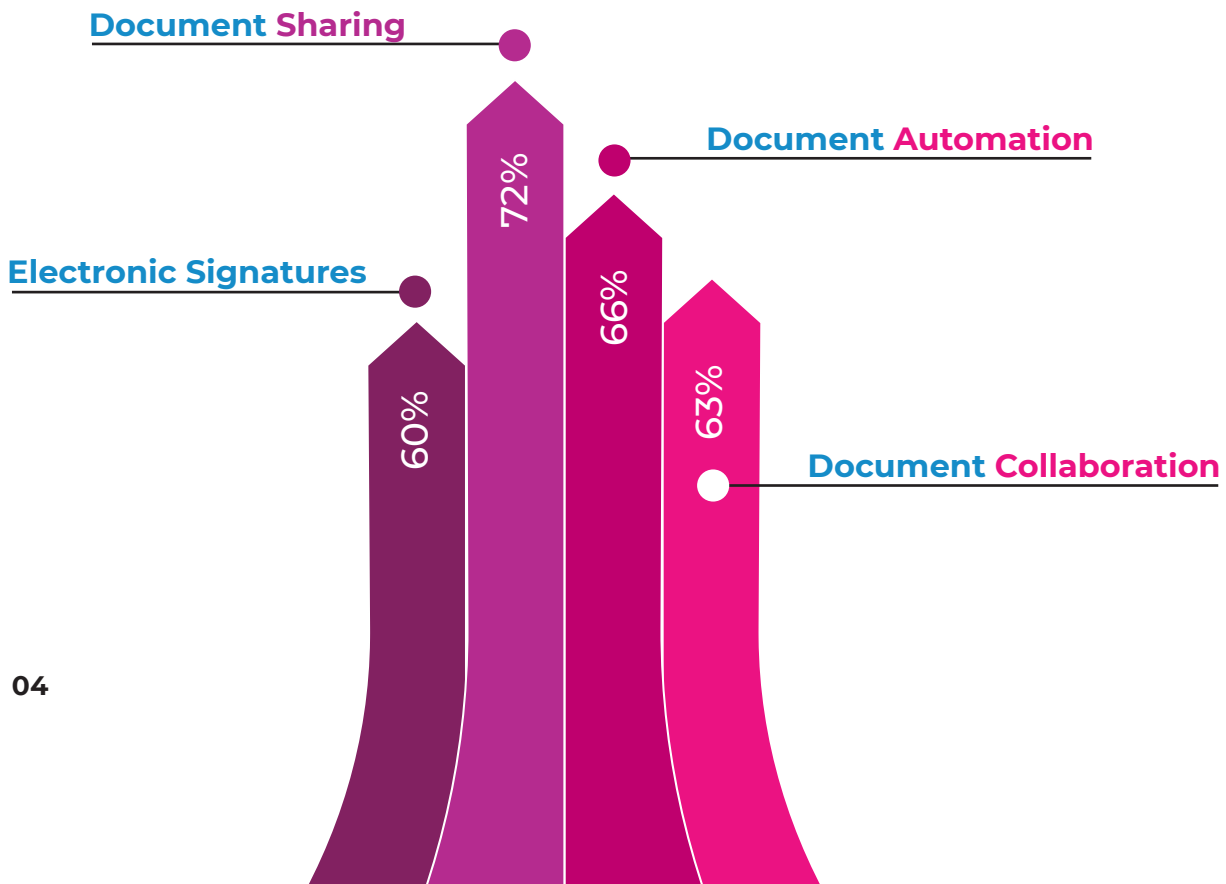

Document Processes

Typical digital document processes are document sharing, document workflow automation, document collaboration, and document signing.

Digital document processes, such as e-signing, allow companies to serve their customers with a digital strategy to gain a dramatic competitive advantage. In the survey, these processes are ranked according to their importance.

77%

of respondents with organizations in North America say e-signature is very important or a critical requirement to support business resilience.

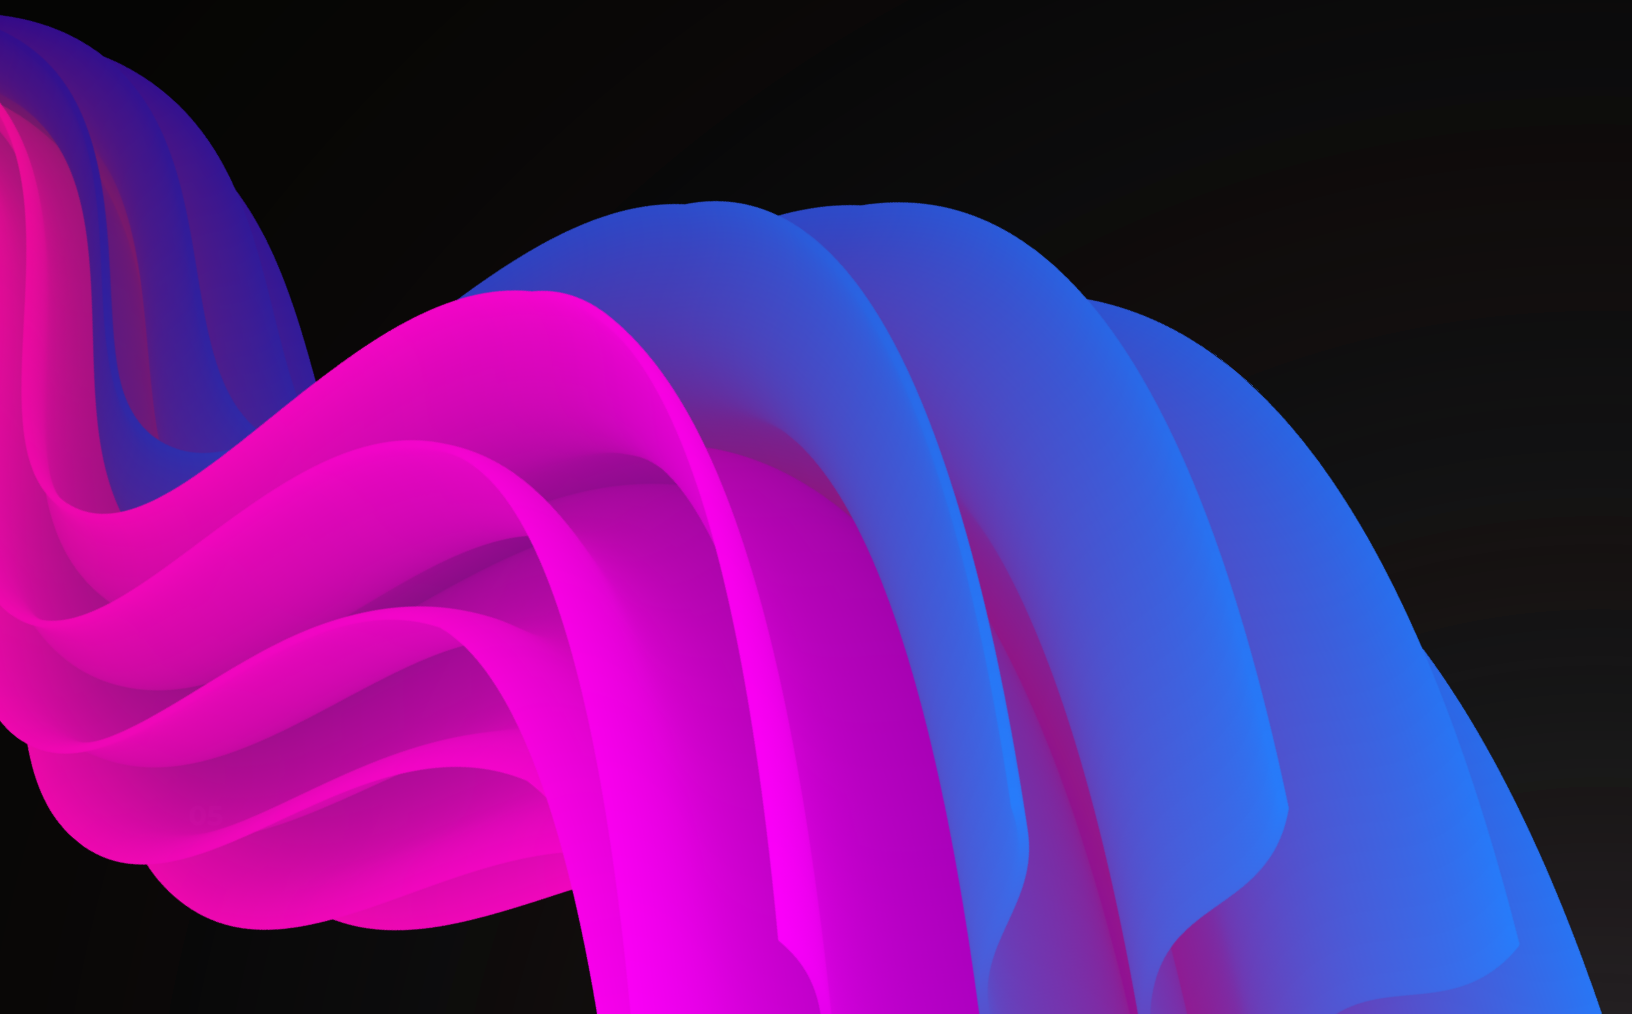

Integrate Document Workflows

Organizations typically implement a number of internal processes for tasks such as order processing, purchase requisitions, and other transactional processes. These independent processes are brought together in a transparent, dynamic and robust way by an electronic document workflow.

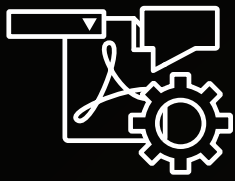

In a collaborative environment, the automation and support of this process through technology can help speed up workflows and reduce costs.

With the help of Text Control developer libraries, all the important steps of a complete workflow can be realized.

Text Control Technologies

Nearly every business process requires the design, creation, sharing, and archiving of documents and reports. Our technologies help software developers to integrate document processing into their client, web and cloud solutions in order to gain the greatest possible competitive advantage.

Reporting

Document Editing

PDF Processing

Electronic Signatures

Document Viewing

Document Workflow

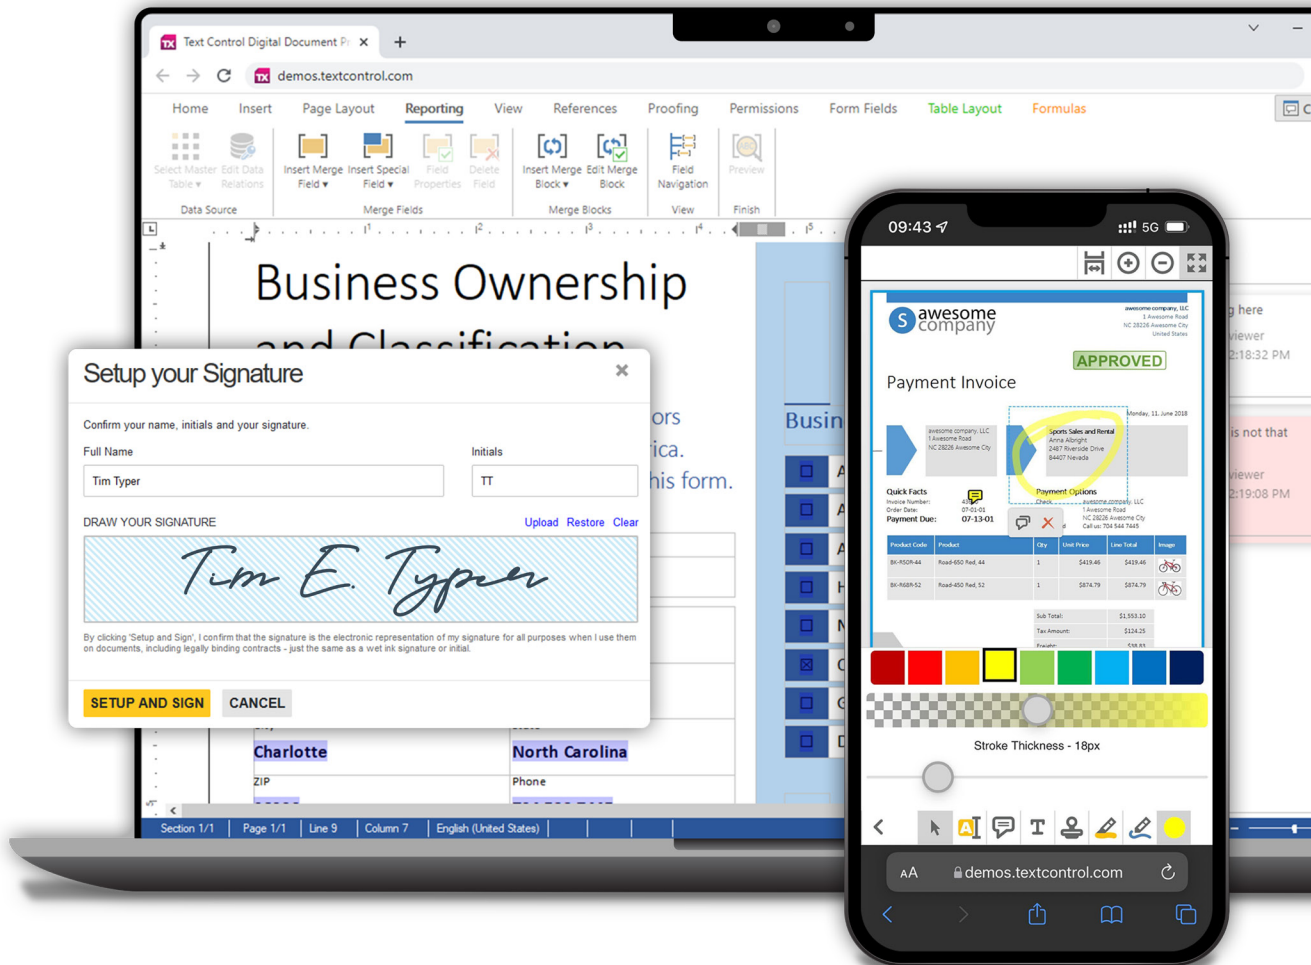

With Text Control libraries, you can integrate the entire workflow into your applications without relying on third-party vendors or services.

Document Editing and Viewing

Integrate a full-featured, browser-based document editor to create proposals, quotes, or contracts and prepare them directly for digital signatures.

MS Word documents such as Office Open XML (DOCX) or RTF can be imported directly and used as templates before they are used to request signatures.

Powerful APIs Designed for Developers

We take care of your document processing needs so your teams can focus on their core competencies and functionality. Easily integrate TX Text Control into your ASP.NET, ASP.NET Core, and Angular Web applications using its rich set of classes and components.

```
1 // use the non-UI ServerTextControl class
2 using (ServerTextControl tx = new ServerTextControl()) {
3     tx.Create();
4     // load an Office Open XML (DOCX) document
5     tx.Load("invoice.docx", BinaryStreamType.WordProcessingML);
6     // export to Adobe PDF
7     byte[] bPDF;
8     tx.Save(out bPDF, BinaryStreamType.AdobePDF);
9 }
```

About Text Control

At Text Control, we believe that developers should be able to easily integrate the best available digital document processing technology into their applications to achieve a successful paper-to-digital transformation.

Digital transformation has changed every process in today's business world. Supply chains are fully connected and e-commerce transactions are skyrocketing.

We are always on the lookout for new and innovative ways to improve the way digital documents are processed.

Text Control has been developing software libraries for more than 30 years. More than 250,000 developers in more than 80 countries use our products to create software that is used by millions of end users on a daily basis.
